

**WASTEWATER TECHNOLOGY
T R A I N E R S**

Transforming today's operators into tomorrow's water quality professionals

**Problem of the Day
2014.Dec.15**

Ken Kerri

Just before I got on the plane in Orange County to fly to Sacramento earlier today, I received an email from Mr. Simon Watson, current president of CWEA, that Dr. Ken Kerri passed away this morning. This is a sad day for all of us in the wastewater treatment business. When Ken first started researching what wastewater treatment plant operators do to write the first volumes of the "Sacramento Manual," he followed operators around for months recording everything they did. Ken was humble and always willing to help. He did more for the wastewater treatment plant operations profession than anybody I can think of. In his honor, today's Problem of the Day is simply:
